Samsung Galaxy Note 7 Better to Have Smells and Sounds? :The Two-WayIt's not terribly easy to get us to say, "Ah, that's just one of those annoying problems. Let's drop all these phones and go back to a simpler, more masculine form of electronic technology." It's not even a little bit about the politics of trying to pass the buck to China. It's a simple request for you to release us from all our electronic distractions, so we can focus on that full, bright, happy, desirable life that you're obviously trying to sell us. This is a patented cell phone. It's a marvelous thing to own, and a thousand times better than the ordinary wallet-mounted mobile device. But, every once in awhile, you might want to have one of your own. And, while they're all useful, there's something about that Samsung Note 7 that even the most perfect one can't help but smell a bit. Are you still hanging on to that venerable piece of technological history? Is the latest Samsung smartphone a must-have for you? Let's you and I have a conversation about it. I'm yours, and yours I am. Your correspondent on the scene at the Samsung New York City flagship store at Rockefeller Center is here with his own opinion on this debate, and may not be able to blame the smell on the air conditioning. We really must all be victims of the irony of being prisoners of our own brilliance. There are a lot of reasons I could give to explain why I just don't own one of these marvelous smartphones. But it'd be totally unfair to end that with "because you smell weird in them." That I'm a big enough nerd to even be writing about this is proof to me of a certain invincibility: I can still explain concepts like the Stanford Marshmallow Test without a performance artist running over the keyboard with a skateboard. I can also explain this survey research of phone owners, which says that most folks who don't own a Samsung mobile device simply don't want one. I can even explain what the world would be like if they all switched to Apple's new(ish) iPhone 7 or iPhone 7 Plus. And yet, there's something about the Samsung Note 7 that's just not right. You can tell as soon as you start plugging it into the charger. A sigh, a slight shake of the head. Or do you not dare be wrong in public? Do

If you're beginning to get overwhelmed with the various brushes, keep your eyes on the Reference Tool at all times. This button opens the Reference Image window, which makes it easy to find exactly what you're looking for. 11. Convert from Color to Black & White Photoshop's black-and-white conversion feature can use one of six preset photo styles or allow you to mix colors using four sliders. If you choose to mix colors, make sure to change the picture mode to RGB instead of CMYK, which is what the conversion feature uses. To access the conversion feature, choose Photo→Mode→Indexed. Another way to accomplish the same effect is to choose Filter→Adjustments→Desaturate, then go to Layer→Channel Mixer→Split Toning→Color Mix. 12. Convert to Black & White with Different Presets The Image→Adjustments menu (choose Window→Adjustments, or go to Window→Adjustments) contains eight preset colors for use with the various adjustments. You can apply any one of these to different areas of your image to create different effects. All of the presets have a + sign next to them. Click the + sign next to one of the black-and-white colors and your image will be given that preset. This gives you more flexibility than applying the same preset to all areas of an image. 13. Make Clarity and Vibrancy Adjustments for Black & White Images Black and white images are usually muted. The Clarity and Vibrancy adjustment tools can be used to add some variety to images. First, click the Adjustments button at the bottom left of your window, then go to Enhance→Adjust Clarity. This adds a granular effect to all of the colors in your image. 14. Create a Bright Eye and Smoky Eye Effect The Eye Color command in Photoshop creates two different eye effects. Select the brush at the bottom of the Eye Color window, then select the texture or pattern that you want to use for the Eye Color. Press F or go to Edit→Eyes→Eye Color. This command is only available if the picture mode is RGB instead of CMYK. The Eye Color command creates two different effects: a bright eye and a smoky eye. Choose Eye Color (Filters→Enhance→Eye Color) for a more subtle effect. A smoky eye works best for
